Final Ultra Street Fighter 4 balance change list

While we've seen a full change-log of the Arcade release of Ultra Street Fighter 4 before, it's come to many people's attention that additional changes are being made to the console version prior to its release.

Thankfully, Capcom's Combofiend has posted a full list of the changes over at Capcom-Unity.

To see the full change-log for all of the characters in Ultra Street Fighter 4, look no further. All you have to do is hit the jump.

Also, we've posted the change list for Elena, Hugo, Poison and Rolento for the Japanese arcade release.

Dammit, Dan didn't get his character specific nonsense fixed.
Could've given him the same change Gouki got "CLMP recognition range increased".
Also, KRK FADC forward is still gonna have Dan dash PAST Cammy at point blank range, meaning he can still do nothing to her unless he delays the dash.
Also, KRK FADC N.J.HP is still character specific too.
Oh well, Dan managed fine without them anyways, and the other buffs are better than nothing.

YES! I got what I asked for. Less pushback on hit from forward HK with Fei. Now we can combo it on most of the cast now. Also like the buff to the close HP. Helps with the CH hit into HKCW I found in AE 2012. Also the need to his focus doesn't change a thing. His focus is good because at startup, his body pulls back causing pokes to whiff and also it only needs a lvl1.5 to cause crumble. Still no word on what MK flip kick is. If that's CW, its awesome because we now get a full CW hit after DP-FADC. With the buff to Ultra we now land that combo on almost the entire cast!!!!

Wow so they couldn't add even 2 or 3 frames of throw invincibility to ex spiral? It's not even a reversal of any type. Watch out for Rose's awesome wake up of delayed wake up or back dash ad nauseum. 4f recovery on orbs? So stupid. I fail to see how the buffs outweigh the nerfs - not sure why the Japanese players were saying she was A tier.

NuklearSRK said on May 22, 2014 at 5:12 p.m.
Why the heck does Ken’s Hadouken get a damage buff, but not any other shoto’s. Also, I personally think that the only buffs that Evil Ryu needs are that his Cr.MK as 5F start up, and his sweep with 6F start up. These other buffs aren’t necessary.

purefire21 said on May 22, 2014 at 5:14 p.m.
I fight very aggressive with Guile so these changes will not effect me not one bit. I always use ultra 1 cause I am so go on reaction. Capcom? if hate Guile so much just take away his boom and flash kick. I bet people will still lose to him. GUILE IS GOD

The other Evil Ryu “buffs”/fixes don’t matter outside his health buff.
I wish they would give him a 5f cr mk (facetiously) because it would be overpowered as hell. He’d easily be the best character in the game.
I argued for a 6 frame crmk all week at Capcom Unity and I couldn’t even get that, a lot of people wanted him to be Akuma Jr. with a 6 frame sweep. But ah well, gotta move on.

Sad they nerfed Blanka’s AA U2. Always felt nice catching normals with it.

I thought its was Balrog’s Ultra 1 that we can change the ending, not the Super?

Makoto no stranger to hard work. Lets do this!

Sadisticcupid said on May 22, 2014 at 5:18 p.m.
• H Thunder Knuckle cancel recovery increased by 1 frame (6F → 7F)
Eh, I’ll live with it there could be a lot more worse nerfs then that

Why is Oni's health reduced?

Aw yiss those Rose buffs are delicious. I still wish EX spiral was still throw invincible, oh well I just have to play better defense with her :)

On a side note I think they made the new EX Dive Kick no longer + on block because it says the advantage is reduced by 3.

Why were they so insistent on refusing to give cody a legit reversal?? What's the point of making his ex criminal upper throwable? They couldn't have given him a legitimate increase to his back dash either, huh? Screw you capcom!

Might as well have not bothered adjusting Balrog at all. They gave him nothing of significance, absolutely nothing that will benefit him.

That EX CU pushback nerf staying and it being throwable kinda sucks, but at least Cody isn’t neutered. I’m just happy he got a range extension on his U2. I don’t know how many times the wrench swings barely miss and I go “Would’ve worked in Ultra!”.

Wow. Its really easy for you guys to focus on the negatives huh.
Even then, there still would be crybabies who thought he was OP.

So Guile and E.Ryu have same health? GG

why would you not nerf rufus’s forward throw smh

Lol @ Oni. Oh capcom.. you so silly.

Welp, Fei doesn’t look horrible. Will take time to adapt. Hopefully he is still viable. crk+4 is a decent trade for losing chain.

YUN IS BACK LETS FUKING GO, but to be honest, i don’t like the changes... all the frauds will be all over him..... Noooooooooooooooooooooooooo!!! Fuk YOU TIER WHORES STAY AWAYYYYYYYYYY we don’t need a Yun army! O_O

And most of these characters don’t look as bad as people say they do, everyone acting like they’re getting nerfed straight to hell with the devil aniling them... doubt it.

So wait, did they actually fix Chun’s Hosenka? Well I’ll be buggered. It only took them around a decade to do it, if that’s what this actually means:

“UC1 now floats lower on hits 2-7; damage reduced on hits 2-9 by 10 each (30 → 20)”

Reduced damage is better than essentially no damage on most of the cast.

Here are some other bits that interest me that I’d like more thoughts on.

“Rear Spin Kick (3+LK) hitbox expanded; start-up reduced by 2 frames (12F → 10F); active frames reduced by 1 frame (4F → 3F); recovery increased by 1 frame (15F → 16F)”

DF.LK now looks usable as an AA. However, it looks like it will have a tendency to trade (active frames reduced by 1). The recovery nerf (15 to 16 f) also makes me wonder how this will impact combos. Will U2 still land after it, or will this simply stop Chun from being able to combo into U2 even on a trade (SSF4)?

“EX Spinning Bird Kick hitbox slightly expanded forward and downward; 5th hit hitbox slightly expanded upward”

The 5th hitbox improvement makes me wonder if this change will have much of an impact on using the move as an AA. Will this mean that EX SBK will trade where it’s currently an open door for everyone? Why only the 5th hitbox? Perhaps the change to expanding the hitbox “slightly” forward and downward will remove the area of Free Punish that exists next to Chun while she’s spinning, but I wonder what it means by “slightly”. Anyway, I suspect that this change will make it more difficult to sweep her out of it.

He was already very good as is, and the damage buffs would have been enough but giving him a cross up is pretty crazy and +1 on ex rush punch is very good on getting in on characters without a 3 frame normal. Not to mention red focus and nerfs to all uppercut characters.

Hello!!

Ken comment’s!
A honest opinion about the changes to usf4!
Ken have the tools for usf4? Foosties, Skr’s, etc...

Another thing about ken tastu’s: that first Knee hit, that doesn’t connect on combos. So when a combo end’s in a tastu, the damage output is low and give -1 on hit. (heavy tastu)

Please honest opinions that have real knowledge of the game and character.
Respects to everybody...

Curioser and curiouser!

It’s exciting thinking about who to main. Leaning towards Deejay at the moment!
That's why you use the ex tastu in combos. Leaves you even

rip adon?

second hit blocked FADC is -7

So they decrease the pushback on Sim's buttons so that they combo, instead of increasing the hitbox so he can keep people out instead of in? Are we talking about the same character?

Vega's neutral jump light kick can now cross up? Am I reading that right?

I will main Yun, Hugo and Rolento in this version, can't wait!!!!!

The only way you're going to be able to link crouching jab into U1 is if it's a counter-hit, which is going to happen next to never, and even then, it's a 1-frame link.

+5 on hit against a 6-frame startup move means that it's never going to work, it's 1 frame short.

Counter-hit adds 1 frame of hitstun to Light attacks and +3 frames to Medium and Heavy attacks.

Guile's U1 essentially got nerfed, there's no reason for the 1-frame faster startup if you're going to remove all the invincibility that made it even a passing glance worthwhile.

Capcom Japan got scared by all the Japan feedback.

Guile gets nerfed even harder with a counter hittable sonic boom and health nerf. Good job, Capcom. You did the bare minimal for Guile while all the shotos gets a substantial buff.

Ok so after it's all said and done, is Daigo coming back to Yun?

edit: nevermind I misread the number that the response was referencing. Herp derp.

Guile's better Flash Kick makes up for the health decrease and counter-hittable Sonic Boom.

He now has better than EX Flash Kick invincibility as standard.
What the hell did they do to Rog?
And what happened with Ryu’s EX DP-> U2 with full animation?
Rose’s changes are nice I guess, but not being invencible to grabs with ex spiral leaves
me in the same position as rog against the corner

The "USFIV: Adon's Balance Change" video released on 5/21
Here is the Video link: http://youtu.be/CEkO3kMIrLoY

I found out few things are different from the version which I played in Japan’s Arcade
Center, so I want to talk a little about the changes.

1. Look at 0:24 in the video, you can see Standing MP could connect to Red Focus
Cancel, which can’t on arcade version right now, this is a good change for Adon to use
more Red Focus Cancel, even this is not a big thing to change Adon’s tier, but still good
to have more things could do.

2. Crouch MK can be link from Crouch LP, which means either C.LP become +6 or more,
which is good for confirm "C.LP→C.MP→L Rising Jaguar” combo too, I always think even
this combo is good but still scare to use it coz if you drop once in tournament, it might
cause you get big combo + knock-down, especially when I play top players, I don’t want
give them any chances to come-back, so this change allow Adon to use C.LP→C.MP→L
Rising Jaguar more.

3. They didn’t talk about any changes on Air-Jaguar kick, maybe they decide not to nerf it
(which I think is better because Instant-Air-Jaguar Kick is so hard to master, nerf it is like
punish the players who pay so much hard work on it.

4. M and H Ground Jaguar Kick reduce damage , which is fair changes , Adon’s Jaguar
Kick is very good when low level fight, but not in High level fight, top players always could
punish or counter Jaguar Kick, so Adon player should improve the way they do Jaguar
Kick(like timing or distance control), and if you did the Jaguar Kick correctly, you still give
people enough pressure even damage reduced a little bit.

Anyway, I feel like no matter what change you do to characters, you should not kill the
character’s unique play style, if it’s over power just reduce the damage or stun or meter
recover first, the most thing is “What Copcom wants this character to be in the game”. I
still feel sorry for Seth, the 50/50 style is so unique in this game. Gamerbee notes totally

That didn’t make any sense to me, there’s nothing like crossing up with a neutral-jump
normal in the game, I think it’s a typo, they most have meant forward jump.

I wonder why they didn’t address changes to the 5 ultra characters from arcade build to
this one. I know for a fact that they’ve changed since I played them at SCR.

Balrog’s Swing Blow got buffed, he can now use the Light version to make people respect
the overhead while still keeping him safe outside of SPDs. Since it has less charge time
he can do it more often and the opponent can’t know which version he used since they
all have the same startup.

It says for Ryu "can be followed by all strikes". U2 is a strike, so it still does full animation.

Ok
But the outher tatsum are subpar? Compared to Ryu, E. Ryu, Akuma and Oni?
Light: Block -6, Hit -2 (in combos do 50)
Medium: -4, 0 (in combos do 80)
Heavy: -5, -1 ( in combos do 120)
Ex -3, 1 ( in combos do 160)
Is the damage worth the risk?
Cody got 3 additional buffs: LP CU -4 on block from -5, "slightly increased walk speed" and Knife Pick up cancel (which is quite useless) and received a nerf: c.MK -2 => -3 compared to the last patch notes.
